Access VBA Programming

Introduction

Introduction Microsoft Access is one of the world's leading database packages. Good databases can become brilliant systems when VBA is used to customise what it does.

Objectives To teach the basics of Visual Basic programming within Access including automatic/background processing of data. During the course the trainees will learn how to create a Wizard, interact with the user, process data in the background and run queries from user input.

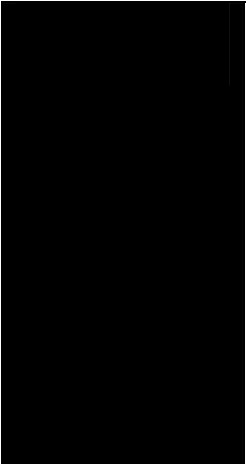

Designed for Experienced users of Access. No previous experience of programming is required.

Duration 2 Days

Topics

- Programming Basics
- The Visual Basic Editor
- Objects & Properties
- Methods & Arguments
- Message Boxes
- Input Boxes
- Include comments
- Event Driven Procedures
- Variables
- Create variables
- Variable types
- Setting variables
