Microsoft Access

Introduction

Introduction Microsoft Access is the world's most popular desktop database program and takes full advantage of the Windows environment.

Objectives To be able to plan and build an Access database. This involves creating tables and understanding the data types required, designing forms for browsing and entering data, understanding how to sort and filter specific information, producing screen or printed reports.

Designed for New users of Access. Participants should have attended our "Introduction to Windows 95/98/NT" course or attained a similar level of proficiency.

Duration Two days

Topics	Introduction	Queries
	Database overview	Select
	Terminology explained	Crosstab
